

Creating Digital Communities in the South West of England

2019-2021

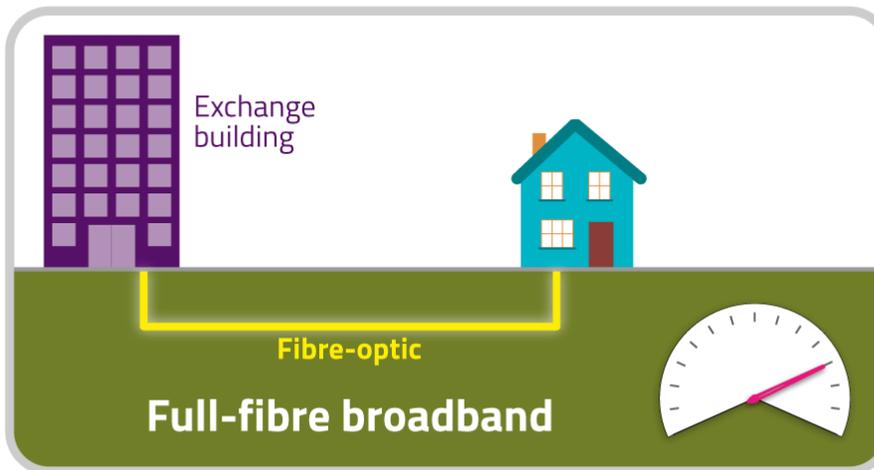

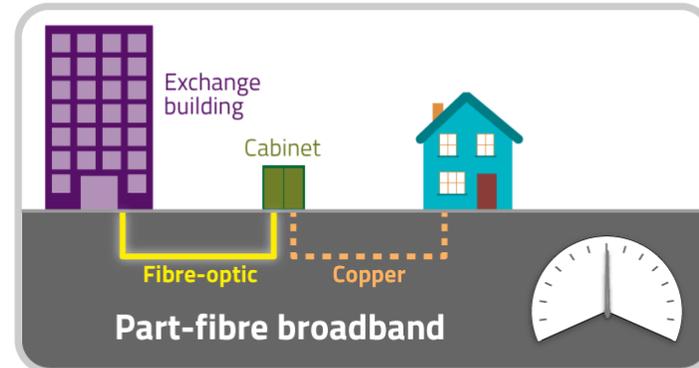

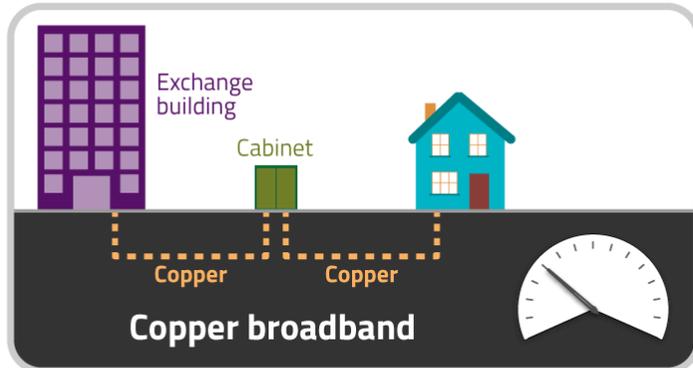

Jurassic Fibre

Introduction

- JFL was founded on 21 June 2018, by Michael Maltby, a resident of Sidmouth with extensive international telecoms experience to build a fibre to the premise network across 350,000 premises of Devon, Somerset and Dorset.
- It currently employs 30 people in the UK and Jamaica (where its network design office is) and will employ over 50 by the end of 2019.
- Jurassic Fibre is funded by Fern Trading Limited, a well-known infrastructure investor. Fern is advised by Octopus Investments, an FSA Regulated entity with £8bn of assets under management.
- The leadership team has a successful track record creating and delivering FTTx programmes both nationally and internationally.

What is FTTP?

Building a full-fibre future

Full fibre offers far more reliable, consistent and faster connections - with speeds of up to one gigabit per second

Why?

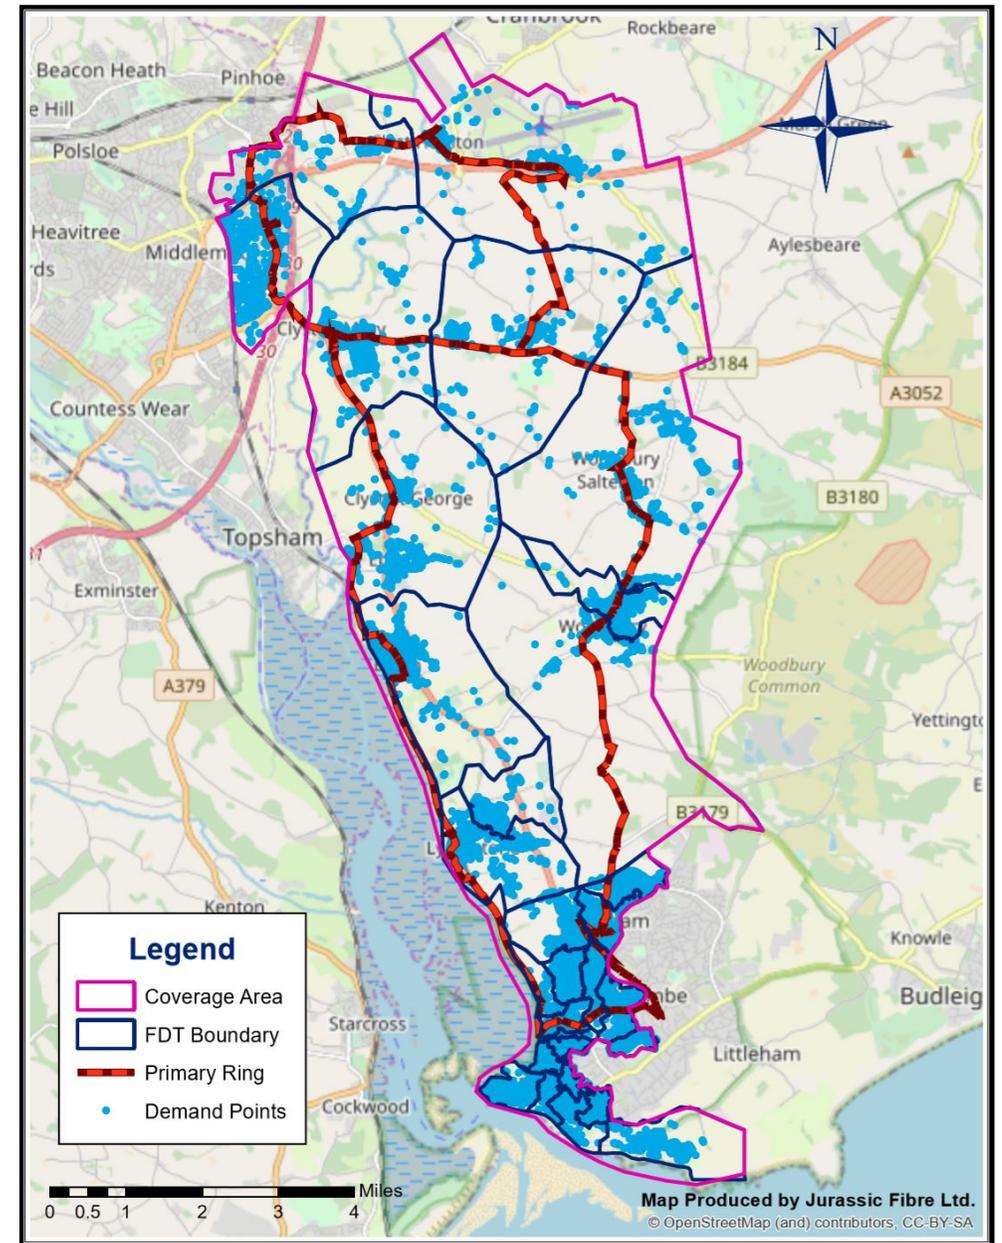

- All our lives are being transformed by the internet: The data we use has grown without pause since the days of dial up and the days when 1Mb/sec was a dream. And no end is in sight. More television is now watched by internet than anything else.
- As we continue to stream more programs at higher resolutions (HD, 4K) to more screens, demand will only continue to grow even before we layer on the internet-of-things. Forecasts show UK data consumption rising on average by 21% every year to 2022 and by 31% every year at “busy hour”, when most of us actually want to go on-line.
- More and more people prefer to work from home and the current strength of broadband is not sufficient to run the business from home at the required rate preferred
- Statistics and data is starting to show a difference between the value of properties and land that have access to fibre compared to those that do not. A difference in areas of up to 24%
- Existing copper networks are struggling, only fibre can meet this challenge and future proof communities and businesses for the 21st Century.

Ultra-Fast...

- Businesses and consumers on the Jurassic Fibre network will experience the highest levels of ultrafast fibre broadband available.
- We can deliver:
 - Ultra-fast connectivity up to 10Gb for business customers
 - Ultra-fast connectivity up to 1Gb for residential customers
 - Resilient fibre connectivity
 - Static IP addresses
 - Resilient landline services
 - Wi-Fi Services and Hotspots
 - Virtual Private Networks (VPN)
 - HD/4k CCTV.

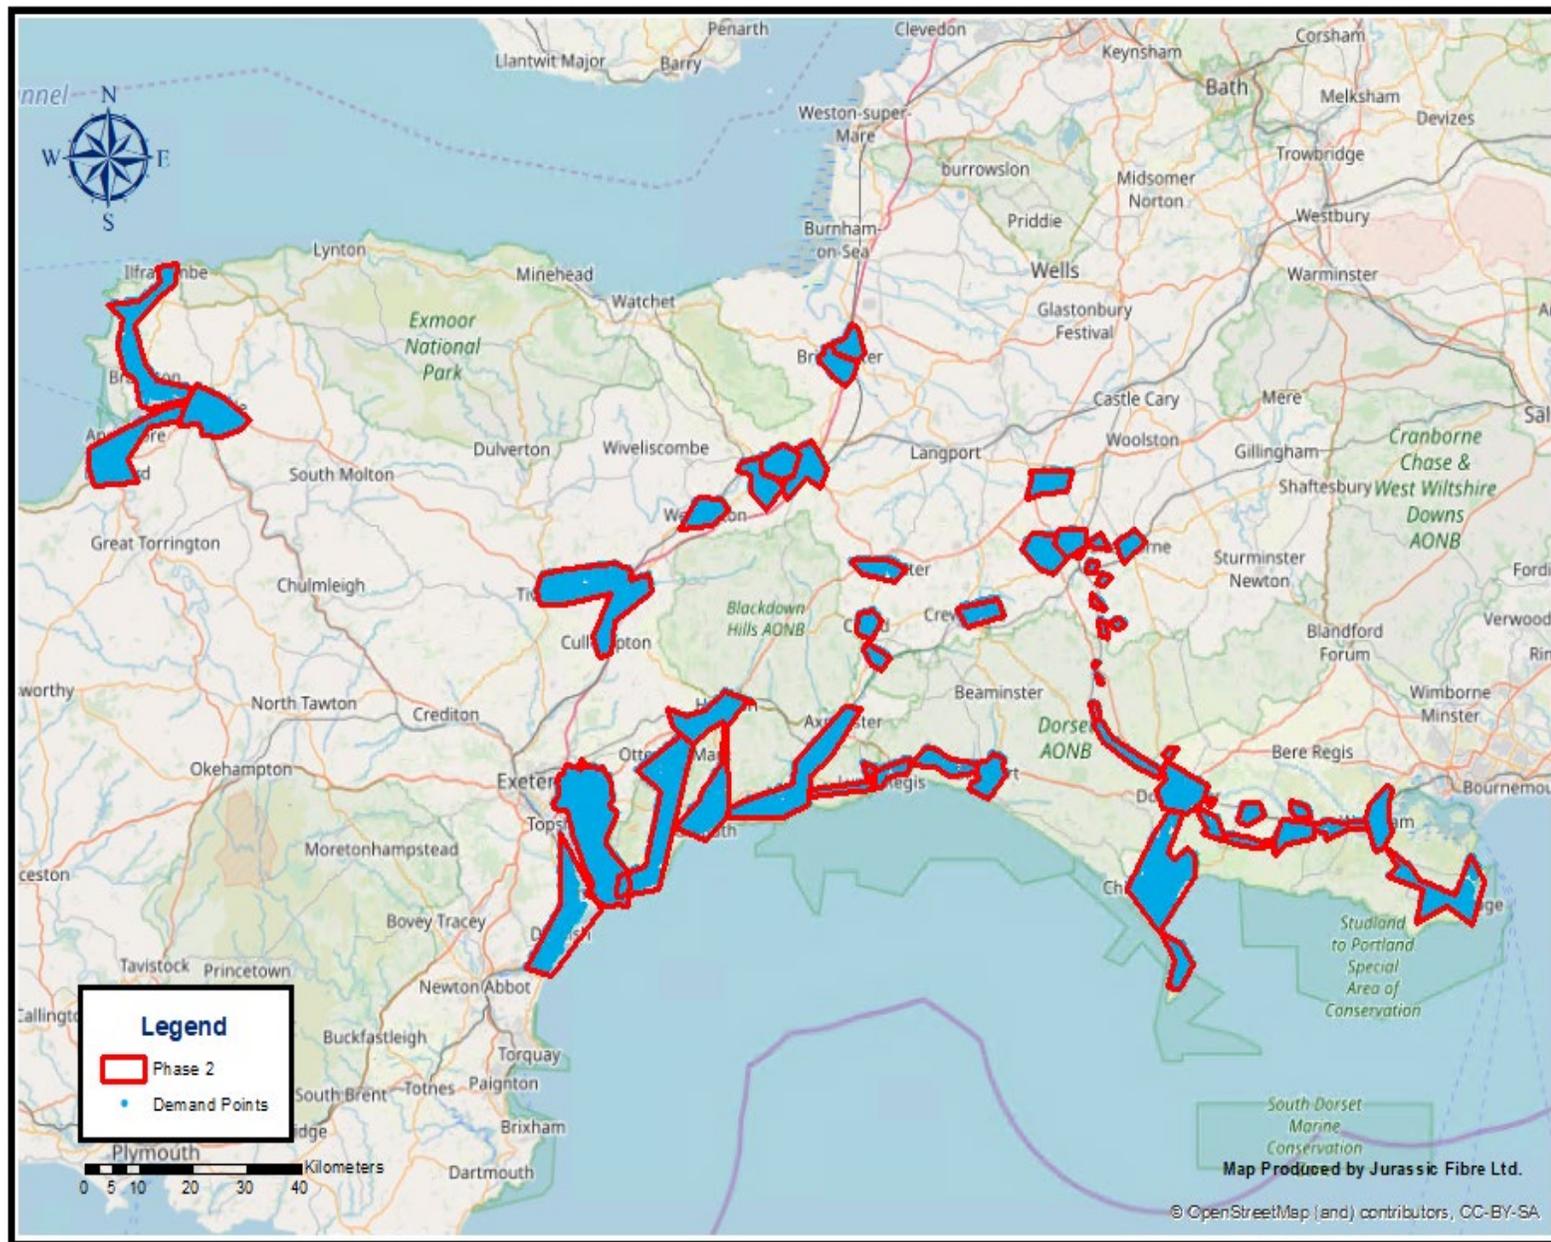

Phase 1 Stage

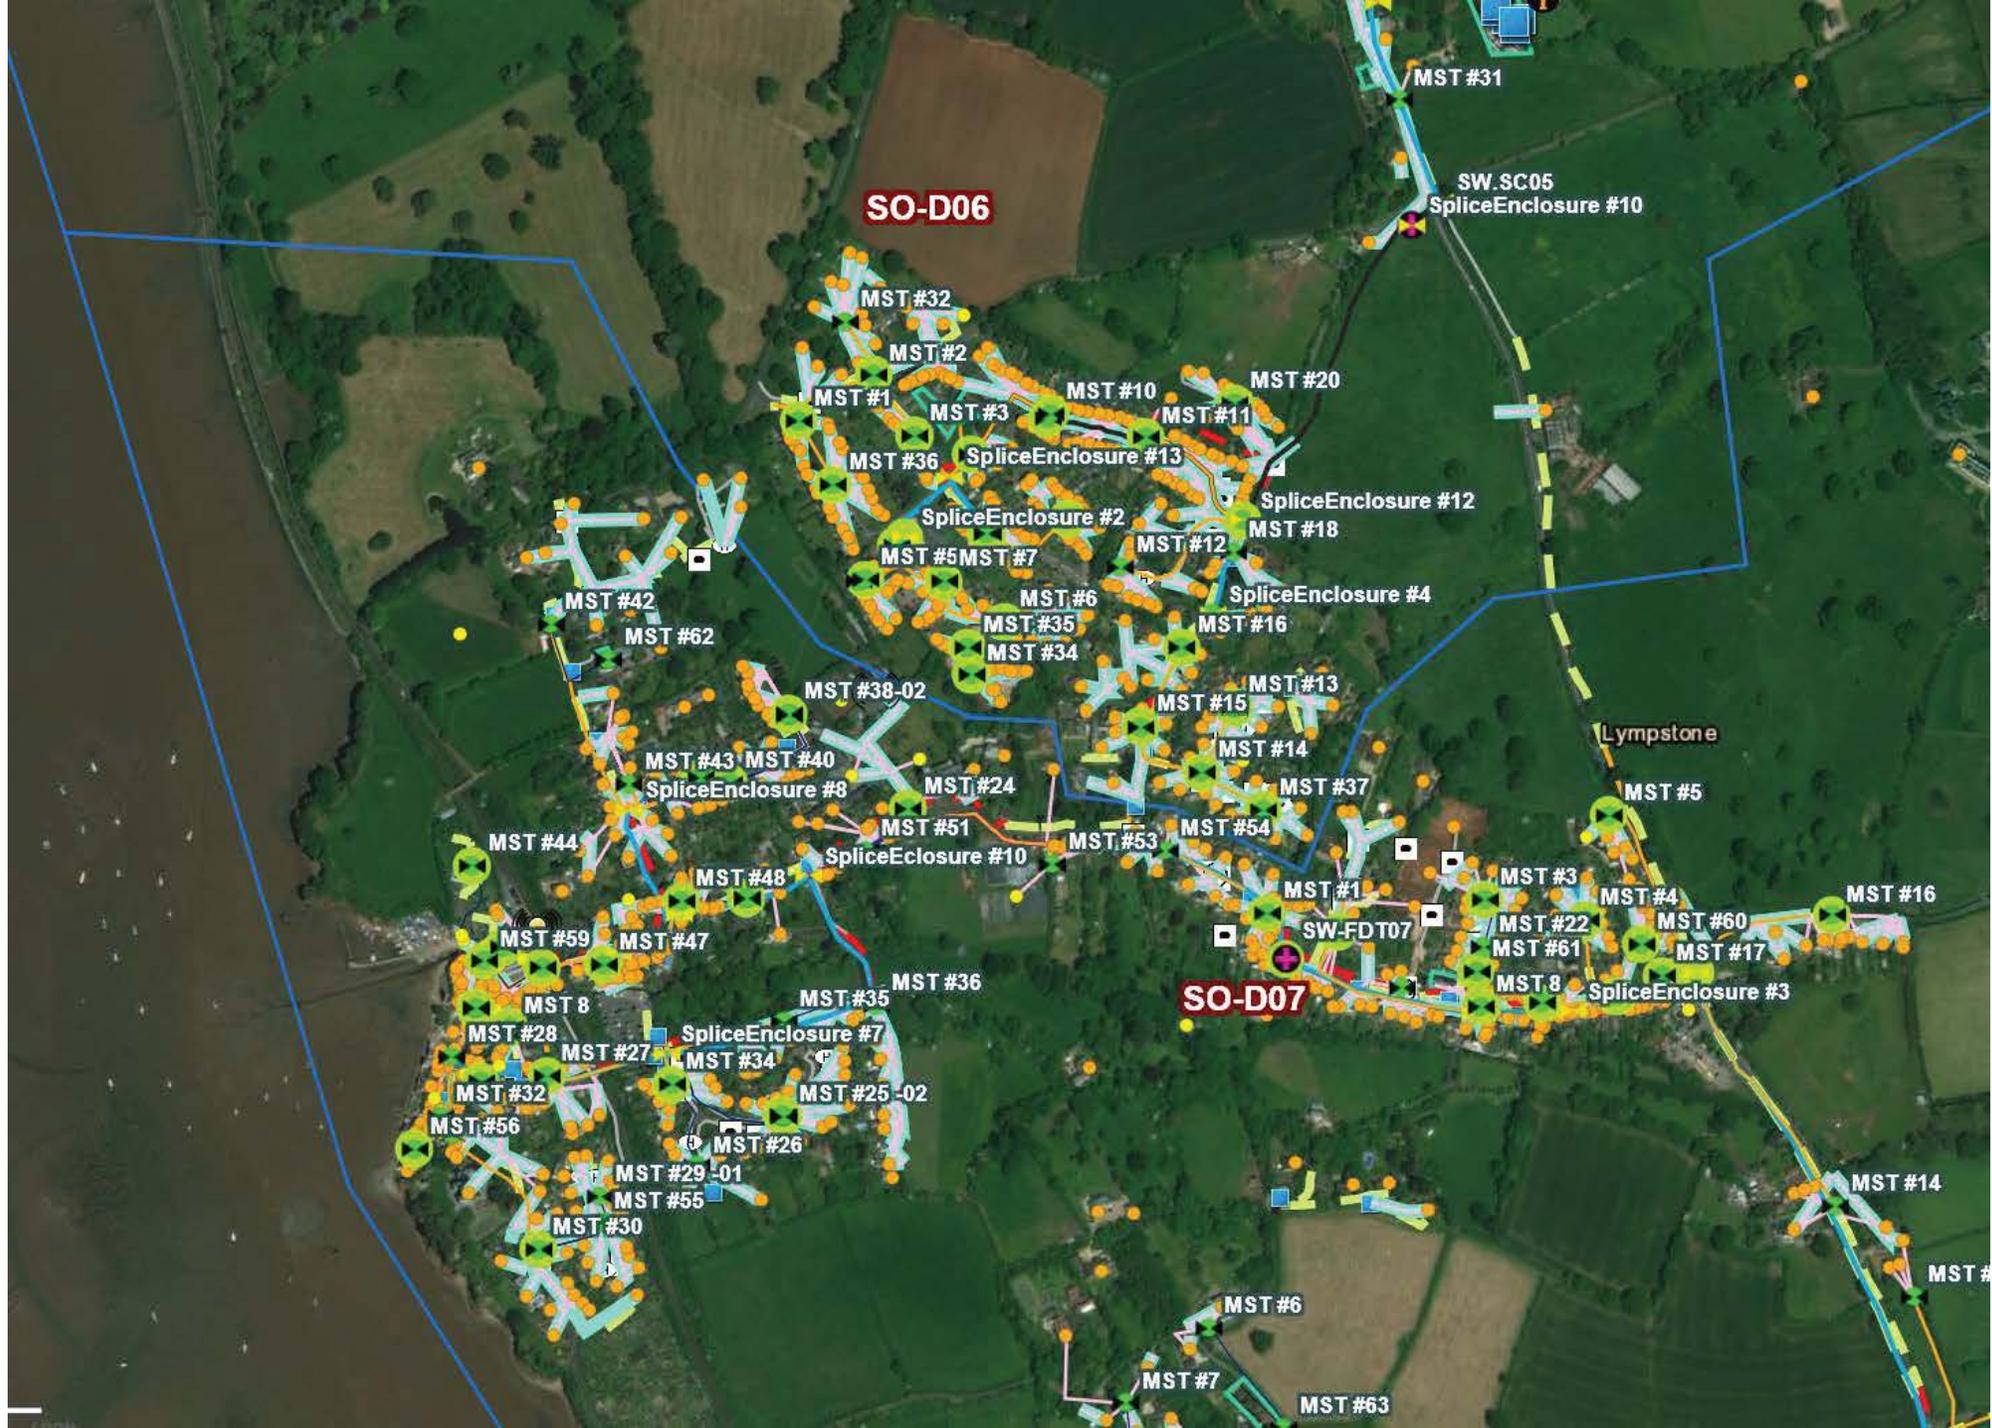

- Sowton industrial estate, Exeter Airport, Clyst St Mary and along the A376 corridor to Exmouth.
- Build to commence during Q4 2019.
- Working with local & regional councils to focus on priority areas during upcoming weeks.
- Working with main utility companies to determine their infrastructure placement
- Need to locate point of presence near station

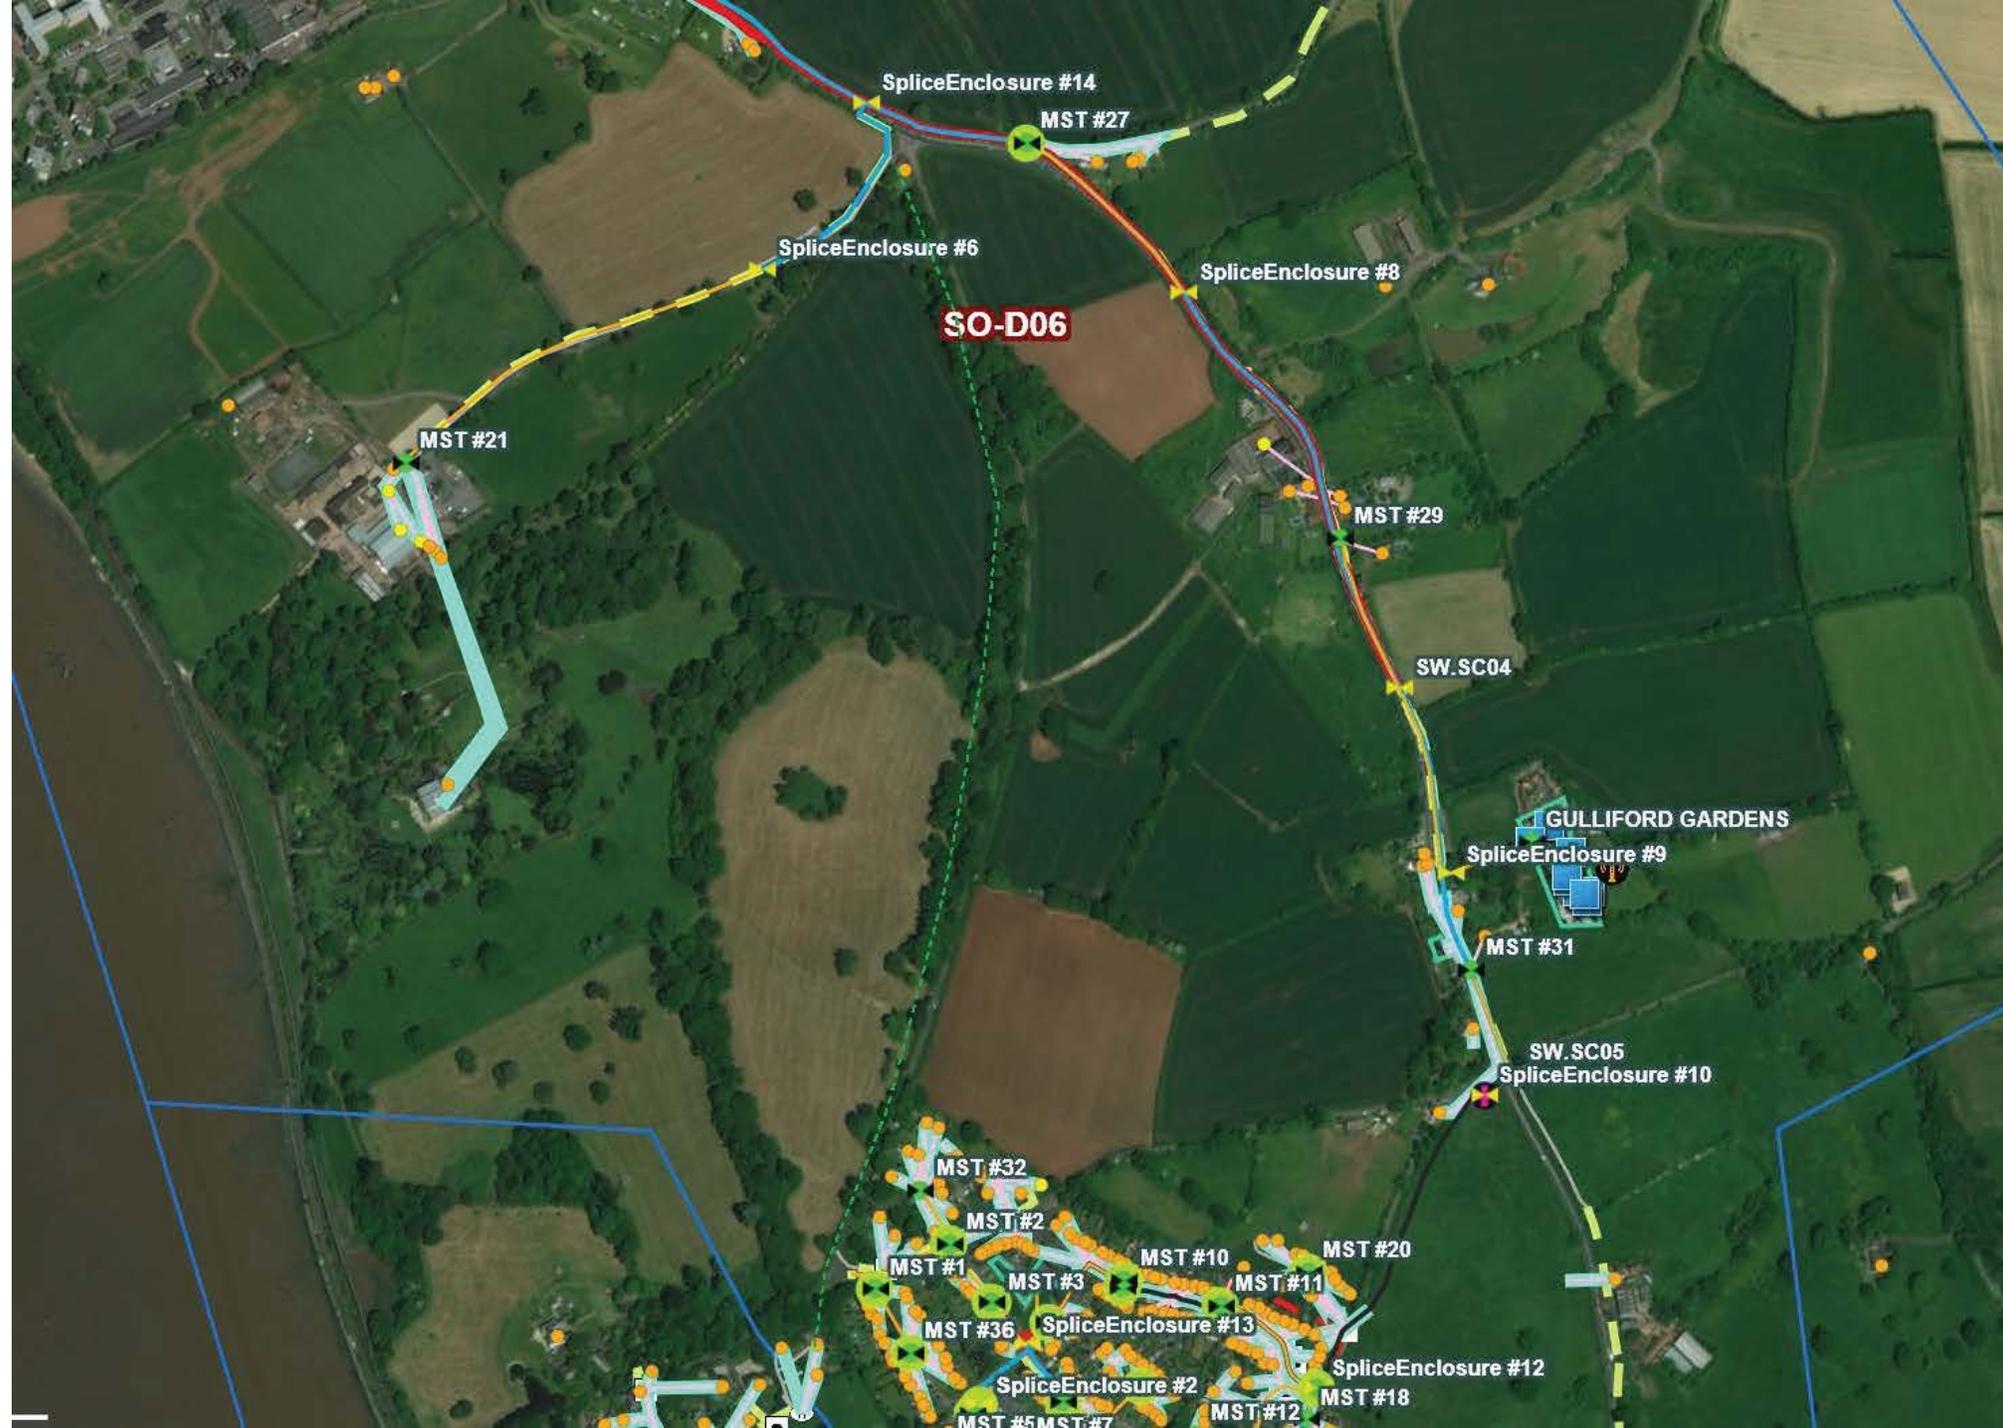

The Future

- Expanding the network up to Ilfracombe and across to Swanage.
- This will be built during 2020-2021.
- Expanding the network to reach 350,000 properties and businesses.
